Implemented Algorithms

- **Matching Pursuit (MP)**
- **Orthogonal Matching Pursuit (OMP)**
- **Subspace Pursuit (SP)**
- **CoSaMP**

All algorithms use sparsity level **S = 3** and tolerance **1e-6**.

Recovery Results (Af & Ar)

- **Exact recovery** (indices `[2, 15, 25]`, values `[5, 3, 40]`): **OMP, SP, CoSaMP**
- **MP**: Fails (wrong support, residual ≈ 0.5–1)

Conclusion: OMP, SP, and CoSaMP deliver perfect recovery at negligible cost, faster than ℓ_0 and more reliable than plain MP.
